Acoustic Insulation.

An Introduction to Acoustafoam.

Acoustafoam works with some of the largest Material Handling Vehicle manufactures in the UK and Europe. We are the only supplier to design, manufacture the full range of products for the sector.

- Acoustic Hood insulation,
- Cab Interiors,
- Head rest, arms rest,
- Edging seals. Enabling you to reduce your supply chain costs.

We consistently invest in new technology so we can provide the latest in innovations and design to our customers.

Acoustic Hood Insulation.

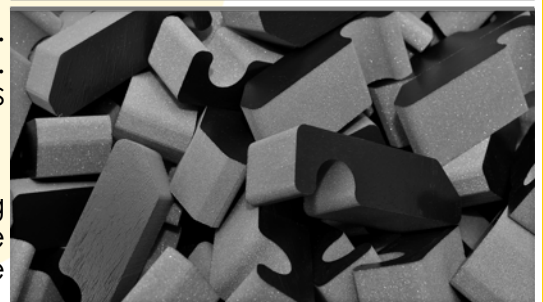

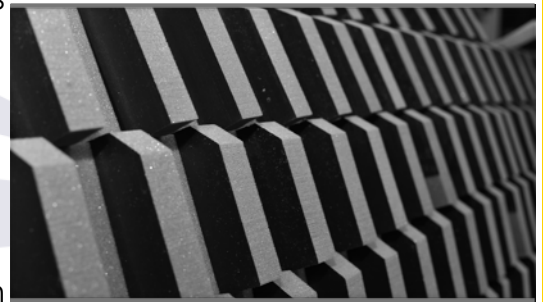

Our acoustic hood insulation are made from a range of high quality high temperature materials. Specifically engineered to deal with the temperatures produced in this environment.

We can provide parts in a kit form to speed up installation. The kits are cut using our in house water jet cutting machines. This allows us to work to tighter tolerances with more precisions and maximise yield.

We manufacture using DXF files. Which dramatically reducing lead time and eliminates tooling costs. We can receive the DXF file in the morning and can be making parts in the afternoon.

We can offer line side delivery for all our products to suit our customers requirements. Reducing the need for stock

We offer the full range of foams, facings, dampening materials and self adhesives . This allows you to add more technical features such as waterproofing, heat reflections or simply make your acoustic solution more aesthetically pleasing.

The Sound of Silence.

Cab Interiors

Cab Interiors.

We design, manufacture and supply bespoke cab interiors including Floor mats, Seat decks, Wheel arch covers, Roof liners and acoustic insulation kits.

Our polyurethane (PU) products are manufactured out of quality BASF polyurethane's. Which creates a high definition finish coupled with high tear strength and shore hardness.

With the investment in technology we are one of only a few manufactures with a multi colour Integral skin polyurethane moulding capability. This technology reduces processing cost and creates the opportunity the create bespoke designs. As you can change the colour of the PU during the moulding stage. Creating a unique product using a number of different colours.

We offer support with design development and testing for all parts manufactured. We can become a part of your design team. To make sure you get the best quality products at the best value.

We offer acoustic testing for absorptions and transmission loss. This makes sure you are using the right material for the job.
